

In the Claims

Please amend the claims as follows:

1. (Currently Amended) An apparatus for mounting within a stationary kitchen-type cabinet between a door of said cabinet and shelving found therein, said apparatus comprising:

a plurality of sheets of planar material, at least a portion of said sheets being attachable to by a magnet, said plurality of sheets of planar material being of a generally thin profile so as to enable placement between said door of said cabinet and said shelving, wherein an area between said door and said shelving may only accommodate an apparatus of generally thin profile;

a hinge mechanism coupled to said sheets of rigid material, said sheets of planar material being sized smaller than an opening within said cabinet; and

a hinge pin insertable within said hinge mechanism, said hinge pin being mountable within said cabinet such that said sheets of planar material are rotatable within said cabinet when the door thereto is open,

wherein at least ~~portions~~ regions of some of said sheets of material are magnetically adhereable to one another so that said sheets of material when magnetically adhered to one another may rotate as a unit, ~~at least portions~~ said regions of said sheets having magnetic material therein for enabling magnetic adhereability, said magnetic material being of opposing magnetic polarity on alternating sides of said sheets,

wherein at least one side of at least one of said plurality of sheets of material includes an erasable surface for non-permanent markers.

2. (Previously Presented) The apparatus of Claim 1, wherein said hinge mechanism is integral to said sheets of material.

3. (Previously Presented) The apparatus of Claim 1, wherein said plurality of sheets of material include tab sections positioned at locations different from one another.

4. (Original) The apparatus of Claim 1, further including a mountable flange housing, wherein said hinge pin is received within said mountable flange housing.

5. (Cancelled)

6. (Previously Presented) The apparatus of Claim 1, wherein said magnetic material is included in a substantial portion of said plurality of sheets.

7. (Previously Presented) The apparatus of Claim 6, wherein at least a portion of one side of at least one of said sheets of material includes a chalk board surface.

8. (Previously Presented) The apparatus of Claim 1, wherein at least one of said sheets of material and said hinge mechanism are at an offset angle so as to provide greater distances between adjacent sheets of material.

9. (Currently Amended) An apparatus comprising:
a stationary cabinet having a top surface and a bottom surface and shelving located therein;
a plurality of planar pages having at least one side thereof being of sufficient magnetic permeability so that a magnet may be attached thereto;
at least one hinge tube coupled to each of said pages;
a hinge pin receivable into said hinge tube of each of said pages, said hinge pin being mountable between said top and bottom surface of said cabinet proximate an opening of the cabinet near a cabinet door therefor and between said cabinet door and said shelving, said pages being rotatable and accessible within said cabinet when the corresponding cabinet door is opened, said plurality of sheets of planar material being of a generally thin profile so as to enable placement between said cabinet door and said shelving, wherein an area between said door and said shelving may only accommodate an apparatus of generally thin profile,

wherein at least portions of some of said pages are magnetically adhereable to one another so that said pages when magnetically adhered to one another may rotate as a unit, said at least portions of some of said pages having magnetic material therein for enabling magnetic adhereability,

wherein at least one side of said one or more pages includes an erasable surface for non-permanent markers

wherein at least a portion of one side of at least one of said pages includes a chalk board surface.

10. (Previously Presented) The apparatus of Claim 9, wherein said hinge tube is integral to said plurality of pages.

11. (Previously Presented) The apparatus of Claim 10, wherein said pages include tab sections positioned at locations different from one another.

12. (Original) The apparatus of Claim 9, wherein said hinge pin is received within a mountable flange housing.

13. (Previously Presented) The apparatus of Claim 9, wherein said magnetic material is included in a substantial portion of said plurality of pages.

14. (Previously Presented) The apparatus of Claim 18, wherein said magnetic material is included in a substantial portion of said plurality of pages.

15. (Currently Amended) The apparatus of Claim 9, wherein ~~at least a portion of one side of at least one of said pages includes a chalk board surface~~ said pages are in the shape of a character.

16. (Previously Presented) The apparatus of Claim 9, wherein at least one of said pages and said hinge mechanism are at an offset angle so as to provide greater distances between adjacent pages.

17. (Original) The apparatus of Claim 9, wherein said hinge pin is spring loaded.

18. (Currently Amended) An apparatus for use within an interior space of a stationary kitchen-type cabinet defined using a top surface and a bottom surface, said apparatus comprising:

a plurality of rigid planar pages having at least one side thereof being of sufficient magnetic permeability so that a magnet may be attached thereto, said plurality of pages of rigid planar material being of a generally thin profile so as to enable placement between a door of said cabinet and shelving therein, wherein an area between said door and said shelving may only accommodate an apparatus of generally thin profile;

at least one hinge tube coupled to each of said pages;

a hinge pin receivable into said hinge tube of each of said pages, said hinge pin being mountable between said top and bottom surface of said interior space proximate an opening thereof, said pages being rotatable when said interior space is accessible, wherein at least portions of said pages are magnetically adhereable to one another so that said pages of material when magnetically adhered to one another may rotate as a unit

further including multiple ones of said pages, wherein at least portions of said pages are magnetically adhereable to one another so that said pages when magnetically adhered to one another may rotate as a unit, at least portions of said pages having magnetic material therein for enabling magnetic adhereability

wherein at least one side of said one or more pages includes an erasable surface for non-permanent markers.

19. (Currently Amended) A method for locating a memo board in a defined space of a stationary cabinet having shelving therein, said method comprising the steps of:

providing a plurality of rigid planar pages having at least one side thereof being of sufficient magnetic permeability so that a magnet may be attached thereto, said rigid pages having at least one hinge tube coupled to each of said pages;

further providing a hinge pin receivable into said hinge tube of each of said pages;
and

mounting said hinge pin between a top and bottom used to define an interior space and between said shelving and a door of said cabinet, said pages being rotatable on said hinge pin when said interior space is accessible, said plurality of pages of rigid planar material being of a generally thin profile so as to enable placement between said door of said cabinet and said shelving, wherein an area between said door and said shelving may only accommodate an apparatus of generally thin profile,

wherein at least portions of said pages are magnetically adhereable to one another so that said pages when magnetically adhered to one another may rotate as a unit, at least portions of said pages having magnetic material therein for enabling magnetic adhereability,

wherein at least one side of said one or more pages includes an erasable surface for non-permanent markers.

20. (Previously presented) The method of Claim 19, wherein said magnetic material is included in a substantial portion of said plurality of pages.
